VO BA HOANG MINH

Applied AI in VFX | Production Pipeline Engineer & Technical Instructor

Ho Chi Minh City, Vietnam | minhhoang250803@gmail.com | +84 902 391 936
3D/VFX work | Portfolio | AI engineering

Professional Summary

Applied AI/VFX practitioner combining OTSU Labs studio production with teaching and production mentoring at FPT Education. Lead art direction, artist workflows, technical troubleshooting and practical AI integration. Founder of Gnomon, delivering paid assessments across product, software, data, models and evaluation.

Studio Production & Teaching

OTSU Labs - Applied AI Operations Lead, VFX Production | 2025

- Led art direction, shot planning and reviews across 2-3 teams of 3D artists and compositors; coordinated asset, animation, look-development and render/compositing handoffs.
- Developed a dedicated studio shader; resolved animation-workflow mismatches and rendering/compositing integration issues.
- Produced realistic assets and stylised anime visuals; collaborated directly with senior talent from Sparta VFX and Sparx across lighting, shading and look development.

OTSU-Cluely partner-project details are covered by an NDA.

FPT Education - Lead Instructor, Applied AI in VFX & Production Mentor | 2025-Present

Thanh Hoa, Vietnam

- Teach hundreds of graphic design and 3D students in Cinema 4D, Blender, After Effects and Unreal Engine through practical projects grounded in professional production workflows.
- Develop lessons, assignments and production briefs; lead scene/render critiques, guide revisions and troubleshoot materials, lighting, rendering, scene organisation and performance.
- Mentor complete commercial-style and short-animation student projects, connecting creative briefs with asset development, production planning and final presentation.
- Supervise business-linked workshops; guide portfolios/showreels, studio roles and production handoffs, helping students present their individual contributions and creative decisions.
- Teach AI integration in VFX: tool selection, output evaluation against creative briefs and manual refinement for production delivery.

Additional Applied AI & VFX Production

Fragments of the Deep (FPT project) - Applied AI Production Lead & Mentor | July 2024-2025

- Mentored student artists and led Unreal Engine 5 production; directed storyboards, cameras and animatics.
- Created characters and procedural underwater/sci-fi environments; established a shared asset library, optimised real-time assets and developed ray-traced lighting and colour grading.

Dihaan Media - Applied AI & VFX Production | 2023

- Created Sofitel Saigon Plaza stage/booth visualisations with IES lighting; supported client walkthroughs.

Contract engagements - Applied AI & VFX Pipeline Engineering | 2023-Present

- Delivered AI-assisted production across modelling, sculpting, texturing, look development, lighting, rendering and compositing; resolved scene and pipeline issues.
- **Contract credits:** Supercomp; G5 Games. **Commercial projects:** Omachi noodle TVC; Rockstar drink TVC.

Applied AI Engineering

Gnomon - Founder & AI Systems Engineer | 2024-Present

- Founded and built Gnomon from scratch into paid assessment delivery; own product strategy, UX, architecture, Claude/Codex-assisted full-stack engineering, customer delivery and support.
- Own data preparation, LLM training/inference, retrieval, tool calling and agent harnesses; design evidence-grounded assessment with deterministic scoring/abstention and offline tool-use evaluation.
- Profiled LLM training on NVIDIA B200 infrastructure, validating checkpoint reload and memory headroom; engineered QLoRA, completion-weighted Triton loss and recoverable checkpoints.

FPT Software - Data Science | 2025-2026

- Consolidated customer/business data, analysed trends and anomalies, and compared forecasting models.

VFX Skills & Tools

Production craft: Modelling/sculpting, topology/retopology, UVs, PBR texturing, look development, procedural assets/FX, particles/dynamics, rigging/animation, motion capture, caching, lighting/rendering/AOVs, compositing, keying, rotoscoping, tracking and colour grading.
Software: Cinema 4D, Blender, Unreal Engine 5, After Effects, Maya, Houdini, ZBrush, Substance Painter, Marvelous Designer, Gaea, DaVinci Resolve, Photoshop and Unity.
Artist tooling: Custom shader development; independent Blender add-on development; Python. **Stylized pipelines:** Anime-inspired NPR, painterly look development and hybrid 2D/3D paint-over compositing.

Education & Languages

FPT University - Bachelor's degree, subject: Art
Vietnamese: native | English: professional proficiency | Japanese: intermediate
AI research - technical report | Graphics & 3D systems
